

TITLE:

TO-DO LIST APPLICATION

SUBMITTED BY:

N.Nagalakshmi (B.Tech CSE-AIML)

**Internship: DecodeLabs Python
Development**

PROJECT OVERVIEW:

The To-Do List Application is a Python-based project that helps users manage their daily tasks. Users can add tasks, view tasks, and delete tasks. This project demonstrates the use of Python lists, loops, and conditional statements.

OBJECTIVE:

→To understand Python Lists.

→To learn data management using lists.

→To implement user interaction through menus.

→To practice loops and conditional statements.

TECHNOLOGIES USED:

TECHNOLOGY:

→Python 3.x

→Anaconda / Spyder

CONCEPTS USED:

→Lists

→append()

→pop()

→Loops

→if-else statements

→User input

SOURCE CODE:

```
tasks = []

while True:

    print("\n----- TO-DO LIST -----")

    print("1. Add Task")

    print("2. View Tasks")

    print("3. Delete Task")

    print("4. Exit")

    choice = input("Enter your choice: ")

    if choice == "1":

        task = input("Enter task: ")

        tasks.append(task)

        print("Task added successfully!")

    elif choice == "2":

        if not tasks:

            print("No tasks found.")

        else:

            print("\nTasks:")

            for i in range(len(tasks)):

                print(f"{i+1}. {tasks[i]}")

    elif choice == "3":

        if not tasks:

            print("No tasks to delete.")

        else:

            for i in range(len(tasks)):

                print(f"{i+1}. {tasks[i]}")
```

```

        num = int(input("Enter task number to delete: "))

    if 1 <= num <= len(tasks):
        removed = tasks.pop(num - 1)

        print(f"'{removed}' deleted successfully.")
    else:
        print("Invalid task number.")

elif choice == "4":
    print("Program closed.")

    break

else: print("Invalid choice. Try again.")

```

```

[*]: tasks = []

while True:
    print("\n----- TO-DO LIST -----")
    print("1. Add Task")
    print("2. View Tasks")
    print("3. Delete Task")
    print("4. Exit")

    choice = input("Enter your choice: ")

    if choice == "1":
        task = input("Enter task: ")
        tasks.append(task)
        print("Task added successfully!")

    elif choice == "2":
        if not tasks:
            print("No tasks found.")
        else:
            print("\nTasks:")
            for i in range(len(tasks)):
                print(f"{i+1}. {tasks[i]}")

    elif choice == "3":
        if not tasks:
            print("No tasks to delete.")
        else:
            for i in range(len(tasks)):
                print(f"{i+1}. {tasks[i]}")

        num = int(input("Enter task number to delete: "))
        if 1 <= num <= len(tasks):
            removed = tasks.pop(num - 1)

```

```

if not tasks:
    print("No tasks to delete.")
else:
    for i in range(len(tasks)):
        print(f"{i+1}. {tasks[i]}")

    num = int(input("Enter task number to delete: "))
    if 1 <= num <= len(tasks):
        removed = tasks.pop(num - 1)
        print(f"'{removed}' deleted successfully.")
    else:
        print("Invalid task number.")

elif choice == "4":
    print("Program closed.")
    break

else:
    print("Invalid choice. Try again.")

```

```

----- TO-DO LIST -----
1. Add Task
2. View Tasks
3. Delete Task
4. Exit
Enter your choice: 3
No tasks to delete.

```

```

----- TO-DO LIST -----
1. Add Task
2. View Tasks
3. Delete Task
4. Exit

```

Enter your choice:

CONCLUSION:

This project helped me understand the fundamentals of Python programming, including lists, loops, and conditional statements. It improved my problem-solving skills and provided practical experience in developing a simple task management application.
